

## Charging in Europe

Any cards and tokens on the Last Mile Solutions charging network can charge at over 275.000 charge points in Europe.

Important:

- The exact tariffs per operator and charge point are available in the charging app.
- The tariff shown in the app can be different from the price set by the operator of the charging infrastructure or set by other service providers.
- For some networks, there is a charge per minute. Please make sure to leave the ChargePoint whenever the car is full. The exact tariff per minute is shown in the app.
- Many operators in the Netherlands and Belgium have variable prices that can be different per charging point. The owner of the charging point often defines the tariff.
- AC is normal charging with speeds up to 22kW.
- Some of the networks see AC 43kW as fast charging. The fast-charging tariff will apply there.
- DC is generally considered to be fast charging.

**Last Mile  
Solutions**

Your e-Mobility,  
Our Expertise

## Austria and Liechtenstein

Important:

Because of national regulations in Austria, almost all transactions are paid by the minute. Charging prices for roaming are also very high. We advise you to disconnect your vehicle when it is full. Do not let your car stay during the night as it will result in very expensive charging sessions.
